

2. In terms of deliverables, you should report how many individuals you removed from the dataset, you should explain what was your preferred model, on which grounds you chose it and interpret all estimated coefficients in the model.

```
library('foreign')
data <- read.dta('heights.dta')

# Fix unusually coded data
data$yearbn <- data$yearbn + 1900
```

How many individuals were removed from the dataset?

What is your preferred model and why?

On which grounds do you chose it?

What are the interpretations of the coefficients?
